

RVF 9000

The power packages for industry

Series RVF 900 is characterised by its almost unbelievable throughput performance which makes it suitable for industrial purposes. The increased throughput capacity is the optimum solution for industrial applications. It can also be incorporated in line solutions with various clipping machines and attachments.

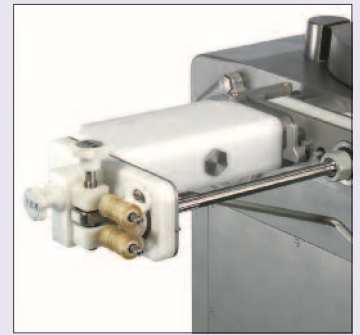

The 350 litre folding hopper permits max. loading as well as quick and easy cleaning. The feed system built in the hopper supports the filling of the chambers in the vane cell. The in-feed system which was enlarged once again compared to series RVF 400 and 700, is the core element and guarantees the most exact portioning and maximum filling capacity.

RVF 900, like the RVF 700 may at any time be equipped with an integrated lifting device as well as with a drive unit for the REX grinding system.
